Fund Objective and Strategy

Investment Objective

The Fund aims to provide long term total returns (meaning capital growth and income). It does so by investing in shares and bonds of companies or governments, either directly or through investing into other funds. The Fund seeks to apply a medium to high risk investment strategy.

Investment Strategy

At least 90% of the fund's exposure is to bonds, shares and other asset classes (for example, real estate, private equity, hedge fund strategies and commodities). The Fund gains exposure to bonds that are investment and non-investment grade. These bonds can be issued/guaranteed by governments, government agencies or supranational bodies or by companies in both developed and emerging markets. These bonds can be denominated in various currencies. The Fund gains exposure to shares and equity-equivalent securities issued by companies in both developed and emerging markets. There aren't restrictions on the size of the companies held in the Fund. The Fund may invest up to 100% of its assets in other eligible funds. The Fund's exposure to such holdings will normally be between 50% and 100%. The fund's primary currency exposure is to the US dollar. See the Prospectus for a full description of the investment objectives and policy.

Risk Disclosure

- The Fund's unit value can go up as well as down, and any capital invested in the Fund may be at risk.
- The Fund invests in bonds whose value generally falls when interest rates rise. This risk is generally greater the longer the maturity of a bond investment and the higher its credit quality. The issuers of certain bonds, could become unwilling or unable to make payments on their bonds and default. Bonds that are in default may become hard to sell or worthless. The value of investible securities can change over time due to a wide variety of factors, including but not limited to: political and economic news, government policy, changes in demographics, cultures and populations, natural or human-caused disasters etc.
- The Fund may invest in Emerging Markets, these markets are less established, and often more volatile, than developed markets and involve higher risks, particularly market, liquidity and currency risks.
- Derivatives may be used by the Fund, and these can behave unexpectedly. The pricing and volatility of many derivatives may diverge from strictly reflecting the pricing or volatility of their underlying reference(s), instrument or asset.
- Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.
- Further information on the Fund's potential risks can be found in the Key Investor Information Document and Prospectus.

¹Result is annualised when calculation period is over one year.

²Volatility since inception, a measure of how much a fund's price goes up or down as a percentage of its average performance.

³Sharpe ratio since inception, a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations.

⁴Ongoing Charges Figure, is based on expenses over a year. The figure includes annual management charge but not the transaction costs. Such figures may vary from time to time.

Monthly Performance Commentary

Macro commentary

Global equities fell in January as a rally early in the month was offset amid uncertainty following the outbreak of the novel coronavirus in China. The MSCI ACWI index fell 1.1% in January. In the US, accommodative monetary policy and a robust labour market continue to support household spending. Activity in manufacturing, business investment and exports has been weak but there are now tentative signs these sectors are beginning to turn. The US Federal Reserve policy looks to be on hold but risks are still likely tilted to the downside – some loosening this year remains possible. A weak manufacturing sector continues to be a drag on growth in Europe; the services sector is showing resilience, despite some recent softening. The European Central Bank (ECB) could engage in more aggressive Quantitative Easing and/or deposit rate cuts (due to weak growth and inflation). But splits on the Governing Council may constrain action and a policy review is also underway. Brexit and political uncertainty has negatively impacted confidence and growth, but fiscal spending and looser monetary policy stands ready to offset this. Weak growth and inflation led to two Bank of England (BoE) MPC members voting for a rate cut in January but interest rates remain on hold. Policy could be eased in the coming months. In China, economic activity has picked up in recent months amid monetary policy loosening in 2019. However, the impact of the coronavirus remains highly uncertain. Private sector activity data continues to be weak in India, although policy easing efforts have been stepped up. Consumption growth may be bottoming and the long-term structural growth potential remains positive. In Japan, economic data continues to be impacted by the VAT tax hike in Q4 2019 but a recently-announced large fiscal package is encouraging for the outlook.

Portfolio performance

Our tactical asset allocation detracted in January, as the broadly risk-off environment did not favour our slightly pro risk stance. Within equities, emerging markets underperformed, meaning our preference here was negative for portfolio returns. Our underweight to global credit also impacted returns. The World Selection portfolios are long-term investment solutions that seek to maximise risk-adjusted returns (Sharpe ratios) in the long run.

Outlook

Our global Nowcast picked up throughout Q4 of 2019 and now sits at just above 2%. US growth remains robust at a “trend-like” pace and is expected to remain steady throughout the year amid a strong labour market and consumer sector. China’s Nowcast picked up in December, with further policy easing likely. However, any recovery is likely to stall in the near-term given the disruption from the recent coronavirus. The size and duration of the impact on the economy remains highly uncertain. The unbalanced nature of growth leaves the global economy vulnerable to negative shocks. The good news is that low inflation allows policy makers to continue to focus on macro stabilisation. Geopolitical risks and political uncertainty continue to create episodic volatility. But in our view, moving to a conservative allocation is likely to be costly, as it was in 2019. Stocks are not overvalued and there is room for a further rally, in our opinion. But we need to monitor profits trends closely, especially in the US. Selected EM risk premiums look relatively high and the economic scenario is becoming more supportive. We continue to overweight EM risk. The outlook is mildly bearish for the US dollar given the Fed is on hold. However, the dollar can act as a safe haven if uncertainties rise.

Positioning

Fixed Income

The portfolios have remained underweight fixed income assets as yields and potential returns have remained low. Most credit asset classes are overvalued in our view and investors are being penalised for bearing interest rate and inflation risks - we prefer equities. Fundamentals have started to come under pressure. With low prospective returns from fixed income, we look to liquid alternatives as a source of diversification.

Equities

We remain overweight given the wide valuation gap versus bonds. But, upside potential is likely to be capped by structural uncertainty while downside could be limited by proactive policy makers. The recent developments in US – China trade talks provide a slightly more positive outlook although near term volatility may result from disruption linked to the coronavirus. However, we remain diversified and maintain our overweight exposure to liquid alternatives at this time.

The shares in HSBC Portfolios have not been and will not be offered for sale or sold in the United States of America, its territories or possessions and all areas subject to its jurisdiction, or to United States Persons.

Further Information can be found in the prospectus.

Terms of Glossary

Accumulation Share: a type of share where the income earned by the Fund is retained in the Fund

ACD: HSBC Global Asset Management (UK) Limited, the Authorised Corporate Director of the Company

Actively Managed: where the fund manager uses their expertise to pick investments to achieve the fund's objectives

Bond(s): a loan, usually to a company or government, that pays interest

Bond Index Futures: a contract stating that the holder agrees to purchase a bond index at a particular price on a specified future date

Collective Investment Scheme: a fund that more than one person contributes to with the aim of increasing the value of their investments or receiving income from a pooled investment. A fund manager will invest the pooled money into one or more types of asset, such as stocks, bonds or property

Credit Rating: an assessment of the credit risk of a company, government or other organisation. It seeks to measure how likely it is that the issuer of a bond will be able to continue to make interest payments and repay the money loaned to it

Developed Markets: countries with relatively high levels of personal income and established economies

Duration: a measure of how long it takes in years for an investor in a bond to recoup the price they paid for the bond from its interest payments. It provides an indication of how much bond prices are likely to change if and when interest rates change

Emerging Markets (EM): countries that are progressing toward becoming advanced, usually shown by some development in financial markets, the existence of some form of stock exchange and a regulatory body

Equities: shares issued by a company

Futures: a financial contract obligating the buyer to purchase an asset (or the seller to sell an asset), such as a physical commodity or a financial instrument, at a predetermined future date and price

Growth: the increase in the value of investments

Government Bond or Gilt: a loan to a national government in return for regular payments (known as the coupon) and a promise that the original investment (principal) is paid back at a specified date. Gilts are loans to the UK government

Hedge Funds: an investment fund that pools money from investors and invests in a variety of assets, often with complex investment strategies and risk management techniques

Hedge or Hedging: using derivative type investments as a way to reduce risk

High yield bond: a bond paying a higher level of interest but which has a lower credit rating than investment grade

Income: money generated by a fund, such as interest from a bond or a dividend from a share, which can be paid out to its investors or paid back into the fund and reinvested

Income Share: the type of Share where the income earned by the Fund is paid out to you

Investment Grade: a credit rating that indicates the issuer of a bond has a relatively low risk of being unable to make interest payments and repay the money to it

Market Capitalisation: the total dollar market value of a company's outstanding shares. Commonly referred to as "market cap", it is calculated by multiplying a company's shares outstanding by the current market price of one share

Maturity: the period of time left for a bond or gilt to remain outstanding before the original loan and any final interest is repaid to the lender

Net Asset Value (NAV): the value of the scheme property of a fund less the liabilities of the fund

Ongoing Charges Figure: a measure of what it costs to invest in a fund. It includes the fee paid to the ACD and other operating costs

Option adjusted duration (OAD): a duration value based on the probability of early redemption call by the bond issuer

Option adjusted spread duration (OASD): estimates the price sensitivity of a bond to a 100 basis-point movement (either widening or narrowing) in its spread relative to treasuries, taking into account the likelihood of early redemption

Price Earnings (P/E) Ratio: the price paid for a share divided by the annual profit earned by the firm per share

Preference Shares: shares of a company which entitle the holder to a fixed dividend, whose payment takes priority over that of ordinary share dividends. Preference shares may be convertible to the ordinary shares of a company

Property-related securities: shares of property companies that own, manage or develop property and Real Estate Investment Trusts (REITs), which are investment companies that own buildings and land

Return(s): the money made or lost on an investment

Share(s): an equally valued holding in a fund of a company, representing part ownership of that fund, (including larger denomination shares and smaller denomination shares)

Sharpe ratio: a measure for calculating risk-adjusted return, and this ratio has become the industry standard for such calculations

Volatility: a measure of the size and frequency of changes in the value of an investment over a short space of time

Yield: the income from an investment, usually stated as a percentage of the value of the investment

Yield to Maturity: the total return anticipated on a bond if the bond is held until the end of its lifetime, excluding strategic currency hedges for Portfolio/Benchmark calculations. Number is shown in percentage

Yield to Worst: the lowest potential yield that can be received on a bond without the issuer actually defaulting, excluding strategic currency hedges for Portfolio/Benchmark calculations. Number is shown in percentage
